

## Entry Model of Speed Control Motors

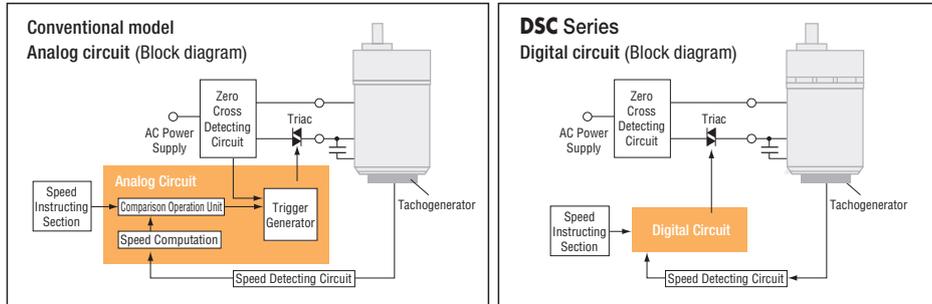

Actual size

# Entry Model of Speed Control Motors

## Speed Control by the Closed Loop Control

The tachogenerator installed in the AC motor will monitor the rotation speed. This speed controller controls the rotation speed kept at the set speed even if the load changes.

● Speed regulation  $\pm 1\%$  (Reference value)

### Digitization of circuit

Most of the conventional analog circuits have been replaced with software, which are now run by the CPU. This has drastically reduced the number of circuit components and has produced the smallest circuit ever offered at low prices. In addition, by the digitization, the deviation between the speed command value and the speed detection value can become closer to zero, improving the speed variation from  $-5\%$  to  $\pm 1\%*$ .

\*0 to permissible torque at 1,000 r/min

## Space Savings and Easier Installation

### ● Compact

The volume is reduced by 63% compared with the general inverter.

### ● Space Saving by Coherent Installation

The width of the body is 35 mm. The units use multiple shafts that can be installed nearly in contact with each other.

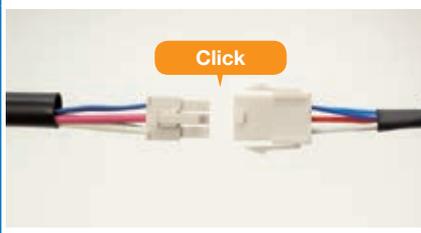

### ● For Thin Control Board

Depth: 90 mm  
Can be installed in a thin control board.

### ● Simple Connection Using the Connector Between the Motor and the Driver

The wiring between the speed controller and the motor uses the connector connection method, enable easy installation and removal.

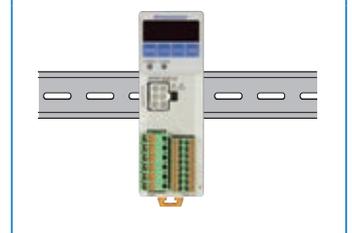

### ● Screwless Wiring for I/O, Unnecessary of Pressure Joining or Thread Fastening

Soldering, crimp tools and torque control for thread fastening are not necessary. Less time is required for wiring and maintenance.

### ● Easy Installation onto the DIN Rail

The speed controller can be installed directly onto the DIN rail.

# Extensive Functions in Compact Body

## Direct Display/Input of Speed and Settings

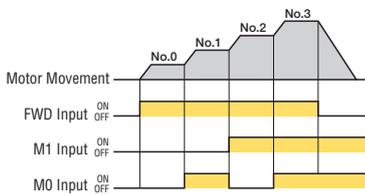

- Monitoring Mode**  
Real-time monitoring of speed (motor, gear axis, conveyor speed);  
Monitoring of alarm, warning and I/O status
- Data Mode**  
Speed Setting
- Parameter Mode**  
I/O allocation, parameters setting
- Test Mode**  
Test operation available without data setting

● The operation lock can prevent wrong operations.

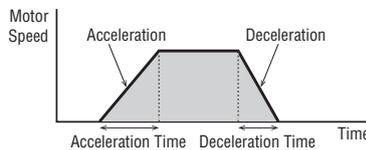

## Speed Control (4-speed)

4 operation data can be set and switched among each other by I/O during operation.

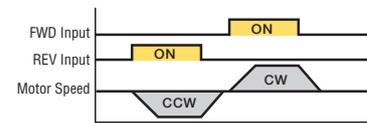

## Acceleration/Deceleration

Makes the motor movement at start/stop smoother. Different acceleration/deceleration rates can be set for each of the 4-speed data.

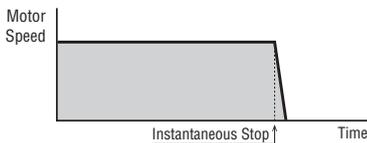

## Bi-directional Operation

Performs the operation according to the command for rotation direction.

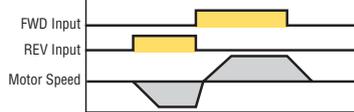

## Instantaneous Stop

Stops the operating motor instantaneously. (Short-cycle start/stop is possible subject to certain conditions.)

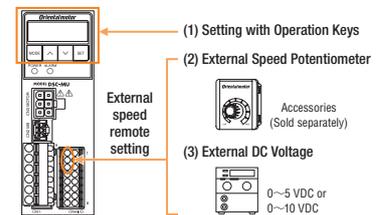

## Instantaneous Bi-directional Operation

Switch instantaneously for rotation direction of the motor during operation. (Short-cycle switching is possible subject to certain conditions.)

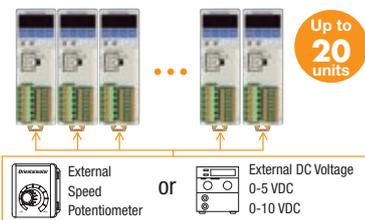

## Settable External Speed

## Parallel Operation (Up to 20 units)

For one external speed potentiometer, up to 20 units can be operated in parallel. The speed of each motor can be finely adjusted by changing the parameter of the controller.

## Limitation of Rotation Speed Range

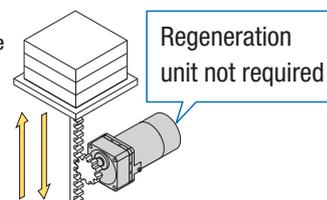

Speed range for speed setting can be limited in advance.

# Vertical Driving Available with an Electromagnetic Brake

The speed control in vertical driving is possible for deceleration control. (For details on the deceleration control and the driving condition on the deceleration control, → page 03-21.)

**Speed Control Range**  
[50 Hz]  
300~1400 r/min  
[60 Hz]  
300~1600 r/min

# Gearhead with High Permissible Torque and High Strength

DSC Series adopts the motor gearhead with high permissible torque and high strength.

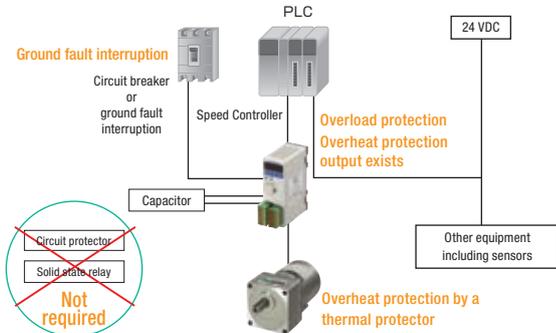

This gearhead uses our unique side plate, increasing the case rigidity. The gear is also strengthened by heat treatment (carburizing and quenching).

## Parallel Shaft Combination Type

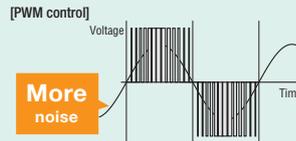

# High Reliability

## The System Configuration is Simple, with a Reassuring Low Noise Level

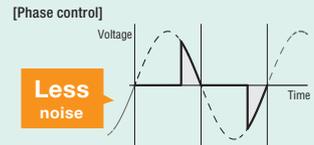

### Inverter + 3-Phase motor

Controlled voltage and frequency  
300 times of switching per cycle

[Condition] ● Carrier frequency: 15 kHz  
● Set frequency: 50 Hz

### DSC Series

Controlled voltage  
2 times of switching per cycle

[Condition] ● Power supply frequency: 50 Hz

## Reliability Enhanced by Alarm Output

The closed loop control feedback the status of the motor to the controller in real time. If an error occurs, such as motor lock due to overloading, the unit output will trigger an alarm signal and stops the power supply to the motor.

## Lineup

### Motor

# Combination List

## Parallel Shaft Combination Type

## Round Shaft Type

### Combination Type

The combination type comes with a motor and a gearhead pre-assembled. The combination of the motor and the gearhead can be changed. They are also available separately. You can remove the gearhead to change the installation position by 90°.

● The specifications apply to the motor only. The variable speed ranges shown are under no load conditions.

ZP: These products are impedance protected.

TP: This indicates that there is a built-in thermal protector (Automatic return type).

● A number in the box □ in the product name indicates the gear ratio.

## Common Specifications

Item	Specifications
Speed Setting Methods	Set in either of the following methods. <ul style="list-style-type: none"> <li>Setting using the control panel Up to 4 patterns of operation data can be set.</li> <li>External speed potentiometer</li> <li>External DC voltage: 0~5 VDC or 0~10 VDC</li> </ul>
Acceleration and Deceleration Time Setting Range	0.0~15.0 seconds Acceleration time/deceleration time varies with the load condition of the motor.
Monitoring Mode	Rotation speed, operation data No., alarm code, warning code, I/O monitor
Data Mode	Rotation speed, acceleration time, deceleration time, initialization
Function	Gear ratio, speed up ratio, fixed display of the lower first digit, prohibition alarm of operation at the initial setting, external speed instruction input, external speed instruction voltage selection, external speed instruction offset, Upper and lower limits of speed, input function selection, output function selection, motor lock detection time, motor rotation direction, initialization
Parameter Mode	
Test Mode	JOG operation
Others	Locking of data editing
Control Power Source	24 VDC±10% 0.15 A or more
Input Signals	Photocoupler input Input resistance 4.7 kΩ Signals can be optionally allocated to IN0~IN5 inputs (6 points) [ ]: Initial setting [FWD], [REV], [MO], [M1], [ALARM-RESET], [FREE], EXT-ERROR Sink input/source input ... Switchable by the selection switch: The factory setting is Sink input
Output Signals	Photocoupler and open collector output External power source: 4.5~30 VDC 40 mA or less Signals can be optionally allocated to OUT0 or OUT1 (2 points) [ ]: Initial setting [SPEED-OUT], [ALARM-OUT], TH-OUT, WNG Sink output/source output ... Supplied through external wiring
Protective Functions	When the following protective functions are activated, the motor will coast to a stop, and the ALARM output will be turned OFF. At the same time, the alarm code is indicated in the operating panel and ALARM LED lights. Alarm types: Motor overheat, motor lock, overspeed, EEPROM error, prohibition of operation at the initial setting, external stop
Maximum Extension Length	Motor and speed controller distance 10 m

## General Specifications

Item	Motor	Speed Controller
Insulation Resistance	The measured value is 100 MΩ or more when a 500 VDC megger is applied between the motor windings and the case after continuous operation under normal ambient temperature and humidity.	The measured value is 100 MΩ or more when a 500 VDC megger is applied between the main circuit terminal and the input signal terminal, between the main circuit terminal and the case, and between the main circuit terminal and FG, after continuous operation under normal ambient temperature and humidity.
Dielectric Strength Voltage	No abnormality is judged even with application of 1.5 kVAC at 50 Hz or 60 Hz between the windings and the case for 1 minute after continuous operation under normal ambient temperature and humidity.	No abnormality is judged even with application of 1.9 kVAC at 50 Hz or 60 Hz between the main circuit terminal and the input signal terminal and between the main circuit terminal and the case, and 1.5 kVAC at 50 Hz or 60 Hz between the main circuit terminal and FG for 1 minute after continuous operation under normal ambient temperature and humidity.
Temperature Rise	A gearhead or equivalent heat sink*1 is connected to the motor and the winding temperature rise is measured at 80°C or less using the resistance change method after continuous operation with no load under normal ambient temperature and humidity.	—
Overheat Protection Device	The 6 W type is impedance protected. All other motors have a built-in thermal protector (Automatic return type) Open: 130±5°C Close: 85±20°C	—
Operating Environment	Ambient Temperature	-10~+40°C (Non-freezing)
	Ambient Humidity	85% or less (Non-condensing)
	Altitude	Up to 1000 m above sea level
	Atmosphere	No corrosive gases or dust. Not exposed to water or oil. Cannot be used in a radioactive area, magnetic field, vacuum, or other special environments.
Vibration	Not subject to continuous vibration or excessive shock Conforms to JIS C 60068-2-6 "Sine-wave vibration test method" Frequency range: 10~55 Hz, Pulsating amplitude: 0.15 mm Sweep direction: 3 directions (X, Y, Z) Number of sweeps: 20 times	
Storage Condition*2	Ambient Temperature	-25~+70°C (Non-freezing)
	Ambient Humidity	85% or less (Non-condensing)
	Altitude	Up to 3000 m above sea level
	Atmosphere	No corrosive gases or dust. Not exposed to water or oil. Cannot be used in a radioactive area, magnetic field, vacuum, or other special environments.
Heat-resistant Class	130 (B)	—
Degree of Protection	IP20	IP20

\*1 Heat sink size (Material: Aluminum)

Motor Output Power	Size (mm)	Thickness (mm)
6 W	115×115	5
15 W	125×125	
25 W	135×135	
40 W	165×165	
60 W	200×200	
90 W	200×200	

\*2 The storage condition applies to a short period such as a period during transportation.

[Note]

● Do not measure insulation resistance or perform the dielectric strength test while the motor and speed controller are connected.

## Output Shaft Speed of the Combination Type

### Motor Shaft Speed

Low speed: 90 r/min, High speed 50 Hz: 1400 r/min, High speed 60 Hz: 1600 r/min

Unit: r/min

Gear Ratio	5	6	7.5	9	12.5	15	18	25	30	36	50	60	75	90	100	120	150	180	250	300	360

## Permissible Torque of Combination Type

A colored  background indicates gear shaft rotation in the same direction as the motor shaft. Others rotate in the opposite direction.

A number in the box  in the product name indicates the gear ratio.

## Permissible Radial Load/Permissible Axial Load

### Parallel Shaft Combination Type

Output Power	Gear Ratio	Permissible Radial Load N		Permissible Axial Load N
		Distance from the tip of the gearhead output shaft 10 mm	20 mm	
6 W	5~25	150	200	40
	30~360	200	300	
15 W	5~25	200	300	80
	30~360	300	400	
25 W	5~25	300	350	100
	30~360	450	550	
40 W 60 W	5~9	400	500	150
	12.5~18	450	600	
	25~300	500	700	
90 W	5~9	400	500	150
	12.5~18	450	600	
	25~180	500	700	

### Round Shaft Type

Output Power	Permissible Radial Load N		Permissible Axial Load
	Distance from the tip of the motor output shaft 10 mm	20 mm	
6 W	50	110	Half of motor mass or less*
15 W	40	60	
25 W	90	140	
40 W	140	200	
60 W	240	270	
90 W			

\*Avoid axial loads as much as possible.

If axial load is unavoidable, keep it at half or less of the motor mass.

## Gearhead Transmission Efficiency

Product Name	Gear Ratio	Efficiency (%)																		
		5	6	7.5	9	12.5	15	18	25	30	36	50	60	75	90	100	120	150	180	250
2GV□B, 3GV□B, 4GV□B		90%									86%						81%			
5GV□B, 5GVH□B		90%									86%						81%			
5GVR□B		90%									86%						81%			

## Permissible Load Inertia J of Combination Types

Unit:  $\times 10^{-4} \text{kg}\cdot\text{m}^2$

Output Power	Gear Ratio	Permissible Load Inertia J

\*If the type includes a DSC Series electromagnetic brake, this is the value when deceleration control is ON.

## How to Read Speed – Torque Characteristics

The characteristics diagram on the right shows the relationship between each setting speed and torque when a speed control motor is operated.

① 50 Hz Safe-Operation Line

② 60 Hz Safe-Operation Line

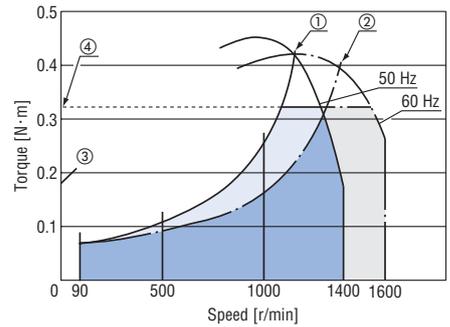

The safe-operation line is the permissible line of the torque that is limited according to the permissible temperature.

Motors can be operated at a continuous rating within the safe-operation line.

The safe-operation line is determined under the most severe condition where there is no heat conduction. Therefore, the motor can be operated depending on installation conditions of the motor.

### Note

● When operating beyond the safe-operation line, make sure the motor case temperature is kept at 90°C or less.

③ Starting Torque

This refers to the size of torque with which the motor can start.

④ Combination Type Permissible Torque

This refers to the permissible value of the motor torque when operating with the gearhead installed.

The permissible torque of the combination type varies according to the gear ratio. Use the motor without exceeding the value on the list of permissible torques.

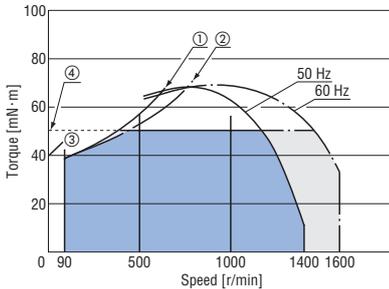

## Speed – Torque Characteristics (Reference)

① 50 Hz Safe-Operation Line ② 60 Hz Safe-Operation Line ③ Starting Torque ④ Combination Type Permissible Torque

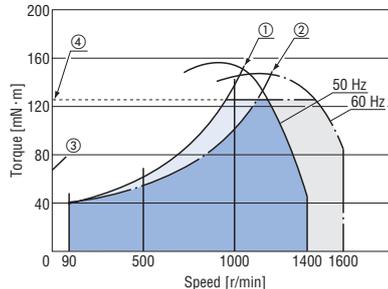

● The characteristics of each output are their representatives. (For motor only)

The permissible torque and starting torque of the motor vary according to the voltage. Check the specifications and the permissible torque of the combination type when using the motor.

### ● Speed Controller

Capacitor	Capacitor Cap	Operating Manual
1 piece	1 piece	1 copy

### The deceleration control function implemented in the electromagnetic brake type

The electromagnetic brake type has the deceleration control function implemented. This enables speed control at the time of vertical driving or lowering operation.

"What is the deceleration control function?"

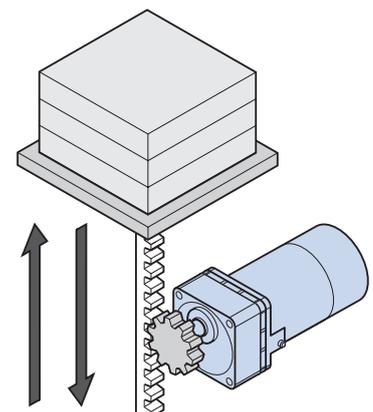

This is the function that adjusts the speed by applying the brake current automatically to the motor when it rotates at a speed faster than the set speed. For operation by vertical driving or even when force is applied to the direction where the motor output shaft rotates due to the inertial load, this function controls the motor to rotate at the set speed.

"Deceleration Control" ON (Factory setting): For vertical driving, lowering operation, horizontal driving and position keeping

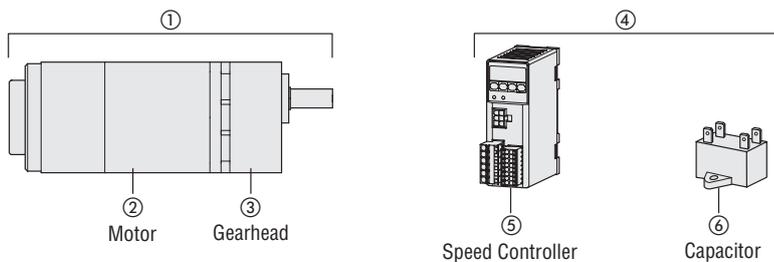

"Deceleration Control" OFF: For horizontal driving and position keeping (Variable speed range is extended.)

● The specification values and permissible torque differ between the "Deceleration Control" ON and OFF.

Item	"Deceleration Control" Parameter ON (Factory setting)	"Deceleration Control" Parameter OFF
Deceleration Control Function	Enabled	Disabled
Variable Speed Range	300~1400 r/min (50 Hz) 300~1600 r/min (60 Hz)	90~1400 r/min (50 Hz) 90~1600 r/min (60 Hz)
Acceleration Time/Deceleration Time Range	0.2~15.0 seconds	0.0~15.0 seconds

## Combination List

### Combination Type

The combination type comes with a motor and a gearhead pre-assembled. The combination of the motor and the gearhead can be changed. They are also available separately. You can remove the gearhead to change the installation position by 90°.

\*The value of ( ) can be set when used with deceleration control OFF.

● When the deceleration control is ON, the rated specification is different. For details, see "Continuous Operation Time with Deceleration Control ON" under Common Specifications (→ Page 03-24).

● The specifications apply to the motor only. The variable speed ranges shown are under no load conditions.

ZP: These products are impedance protected. TP: This indicates that there is a built-in thermal protector (Automatic return type).

● A number in the box □ in the product name indicates the gear ratio.

## Common Specifications

Item	Specifications	
Speed Setting Methods	<ul style="list-style-type: none"> <li>Set in either of the following methods.</li> <li>Setting using the control panel                             <ul style="list-style-type: none"> <li>Up to 4 patterns of operation data can be set.</li> </ul> </li> <li>External speed potentiometer</li> <li>External DC voltage: 0~5 VDC or 0~10 VDC</li> </ul>	
Acceleration and Deceleration Time Setting Range	0.2~15.0 seconds (0.0~15.0 seconds: This value can be set when using the motor with the deceleration control OFF) Acceleration time/deceleration time varies with the load condition of the motor.	
Function	Monitoring Mode	Rotation speed, operation data No., alarm code, warning code, I/O monitor
	Data Mode	Rotation speed, acceleration time, deceleration time, initialization
	Parameter Mode	Gear ratio, speed up ratio, fixed display of the lower first digit, prohibition alarm of operation at the initial setting, external speed instruction input, external speed instruction voltage selection, external speed instruction offset, upper and lower limits of speed, deceleration control, brake type, input function selection, output function selection, motor lock detection time, motor rotation direction, initialization
	Test Mode	JOG operation, release of the electromagnetic brake
	Others	Locking of data editing
Control Power Source	24 VDC±10% 0.15 A or more	
Input Signals	Photocoupler input Input resistance 4.7 kΩ Signals can be optionally allocated to IN0~IN5 inputs (6 points) [ ]: Initial setting [FWD], [REV], [MO], [M1], [ALARM-RESET], [FREE], EXT-ERROR Sink input/source input ... Switchable by the selection switch: The factory setting is Sink input	
Output Signals	Photocoupler and open collector output External power source: 4.5~30 VDC 40 mA or less Signals can be optionally allocated to OUT0 or OUT1 (2 points) [ ]: Initial setting [SPEED-OUT], [ALARM-OUT], TH-OUT, WNG Sink output/source output ... Supplied through external wiring	
Protective Functions	When the following protective function is activated, the output to the motor is blocked and the electromagnetic brake operates to stop the motor. The alarm output is turned OFF. At the same time, the alarm code is indicated in the operating panel and ALARM LED lights. Alarm types: Motor overheat, motor lock, overspeed, EEPROM error, prohibition of operation at the initial setting, external stop	
Continuous Operation Time with Deceleration Control ON	6 W	Continuous operation time: Continuous Operating duty: Continuous
	15 W, 25 W, 40 W	Continuous operation time: 1 minute Operating duty: 50% or less (Example: Operation for 1 minute, stop for 1 minute)
	60 W, 90 W	Continuous operation time: 1 minute Operating duty: 33% or less (Example: Operation for 1 minute, stop for 2 minute)
Maximum Extension Length	Motor and speed controller distance 10 m	

## General Specifications

Item	Motor	Speed Controller
Insulation Resistance	The measured value is 100 MΩ or more when a 500 VDC megger is applied between the motor windings and the case after continuous operation under normal ambient temperature and humidity.	The measured value is 100 MΩ or more when a 500 VDC megger is applied between the main circuit terminal and the input signal terminal, between the main circuit terminal and the case, and between the main circuit terminal and FG, after continuous operation under normal ambient temperature and humidity.
Dielectric Strength Voltage	No abnormality is judged even with application of 1.5 kVAC at 50 Hz or 60 Hz between the windings and the case for 1 minute after continuous operation under normal ambient temperature and humidity.	No abnormality is judged even with application of 1.9 kVAC at 50 Hz or 60 Hz between the main circuit terminal and the input signal terminal and between the main circuit terminal and the case, and 1.5 kVAC at 50 Hz or 60 Hz between the main circuit terminal and FG for 1 minute after continuous operation under normal ambient temperature and humidity.
Temperature Rise	The measurement of the windings temperature rise in the resistance method is 80°C or less after no-load continuous operation under normal ambient temperature and humidity.	—
Overheat Protection Device	The 6 W type is impedance protected. All other motors have a built-in thermal protector (Automatic return type) Open: 130±5°C Close: 85±20°C	—
Operating Environment	Ambient Temperature	-10~+40°C (Non-freezing)
	Ambient Humidity	85% or less (Non-condensing)
	Altitude	Up to 1000 m above sea level
	Atmosphere	No corrosive gases or dust. Not exposed to water or oil. Cannot be used in a radioactive area, magnetic field, vacuum, or other special environments.
	Vibration	Not subject to continuous vibration or excessive shock Conforms to JIS C 60068-2-6 "Sine-wave vibration test method" Frequency range: 10~55 Hz, Pulsating amplitude: 0.15 mm Sweep direction: 3 directions (X, Y, Z) Number of sweeps: 20 times
Storage Condition*	Ambient Temperature	-25~+70°C (Non-freezing)
	Ambient Humidity	85% or less (Non-condensing)
	Altitude	Up to 3000 m above sea level
	Atmosphere	No corrosive gases or dust. Not exposed to water or oil. Cannot be used in a radioactive area, magnetic field, vacuum, or other special environments.
Heat-resistant Class	130 (B)	—
Degree of Protection	IP20	IP20

\*The storage condition applies to a short period such as a period during transportation.

### Note

Do not measure insulation resistance or perform the dielectric strength test while the motor and speed controller are connected.

## Output Shaft Speed with Deceleration Control ON (Factory Setting), Permissible Torque, Starting Torque

Description on the deceleration control → Page 03-21

### Output Shaft Speed

#### ● Motor Shaft Speed

Low speed: 300 r/min, High speed 50 Hz: 1400 r/min, High speed 60 Hz: 1600 r/min

Unit: r/min

Gear Ratio		7.5	9	12.5	15	18	25	30	36	50	60	75	90	100	120	150	180	250	300	360
High Speed	50 Hz	186	155	112	93	77	56	46	38	28	23	18.6	15.5	14	11.6	9.3	7.7	5.6	4.6	3.8
	60 Hz	213	177	128	106	88	64	53	44	32	26	21	17.7	16	13.3	10.6	8.8	6.4	5.3	4.4
Low Speed		40	33	24	20	16	12	10	8.3	6	5	4	3.3	3	2.5	2	1.6	1.2	1	0.83

### Permissible Torque and Starting Torque

- Permissible torque and Starting Torque are fixed within the variable speed range (50 Hz: 300~1400 r/min, 60 Hz: 300~1600 r/min).
- In the case of horizontal driving, even if the deceleration control is ON, the torques with the deceleration control OFF are available. Permissible torque and starting torque when deceleration control is OFF → Page 03-26
- A colored  background indicates gear shaft rotation in the same direction as the motor shaft. Others rotate in the opposite direction.
- A number in the box  in the product name indicates the gear ratio.

	18~36		85	16
	50~180		95	14

- Installation Screws: 4 plain washers and 4 spring washers are included.
- The installation screw material is stainless steel.

# Connection and Operation

## Names and Functions of Speed Controller Parts

Name		Overview
Operating Panel	Display (4-digit LED)	Displays speed, parameter, alarm, etc.
	Operation Keys	Switches the operation mode or changes the setting or parameter of the operation data.
POWER LED (Green)		Lights while the AC power supply is provided to the speed controller.
ALARM LED (Red)		Lights when the alarm is generated.
Motor Connector (CN3)		Connect the connector of the motor.
Electromagnetic Brake Connector (CN2)*		Connects the connector of the electromagnetic brake.
Main Circuit Connector (CN1)		Connects the AC power source, capacitor and FG.
Control Circuit Connector (CN4)		Connects the DC power supply for control and I/O signals.
Sink Logic/Source Logic Selector Switch		Switches between the sink logic and source logic for the input signals.

\*Only the electromagnetic brake type is connected.

### 1 Main Circuit Connector (CN1)

Pin No.	Description	Description
1	Capacitor	Connects the capacitor.
2		
3	N.C.	No connection.
4	AC Power Supply	Connects the live side.
5		Connects the neutral side.
6	FG	Connects the ground wire.

### 2 Control Circuit Connector (CN4)

Pin No.	Signal Name	Function*1	Description
1	+24 V	DC Power Supply for Control	Connects the 24 VDC power supply for control.
2	0 V (GND)		
3	IN0	[FWD]	The motor rotates in the FWD direction when "ON".*2
4	IN1	[REV]	The motor rotates in the REV direction when "ON".*2
5	IN2	[MO]	Select the operating data.
6	IN3	[M1]	
7	IN4	[ALARM-RESET]	Alarms are reset.
8	IN5	[FREE]	When turning the FREE Input to "ON" during the motor operation, the motor automatically stops. With the FREE Input "ON", even if the FWD Input or REV Input is turned "ON", the motor does not rotate. For electromagnetic brake types, turn the FREE Input to "ON" to release the electromagnetic brake.
9	VH	External Speed Setting Input	Connects this to externally set the speed by using an external speed potentiometer or external DC voltage.
10	VM		
11	VL		
12	N.C.	—	No connection.
13	OUT0+	[SPEED-OUT]	For every rotation of the motor output shaft, 12 pulses are output.
14	OUT0-		
15	OUT1+	[ALARM-OUT]	This signal is output when an alarm is generated. (Normally closed)
16	OUT1-		

\*1 The [ ] indicates the functions assigned in the factory. From the following signals, necessary signals can be assigned to any of the 6 input signal terminals (IN0~IN5) and 2 output signal terminals (OUT0, OUT1).

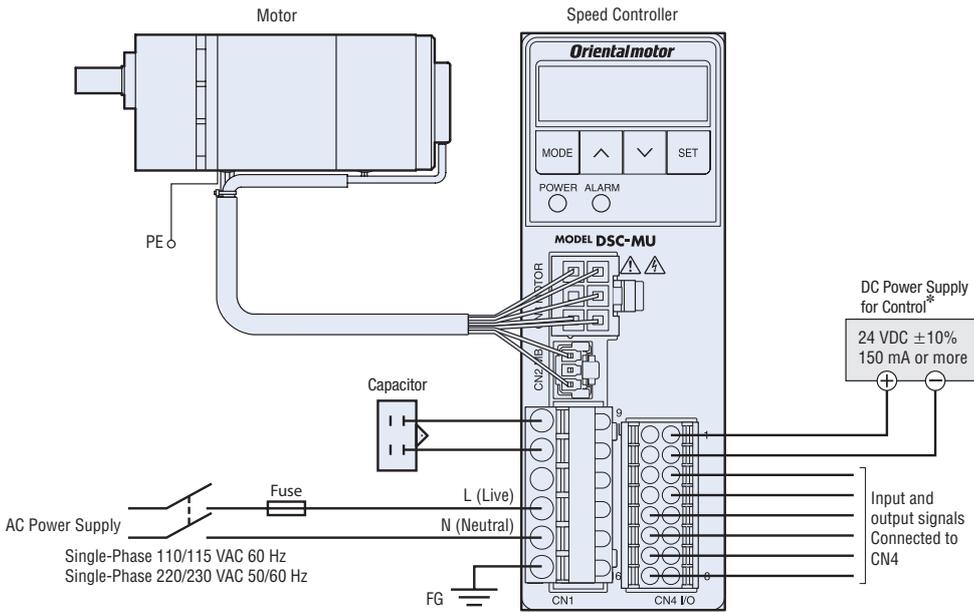

6 points for any of the 7 input signals (FWD, REV, MO, M1, ALARM-RESET, FREE, EXT-ERROR)

2 points for any of the 4 output signals (SPEED-OUT, ALARM-OUT, TH-OUT, WNG)

\*2 The rotation direction varies depending on the gear ratio of the gearhead or parameter setting.

## ● Connection Diagram

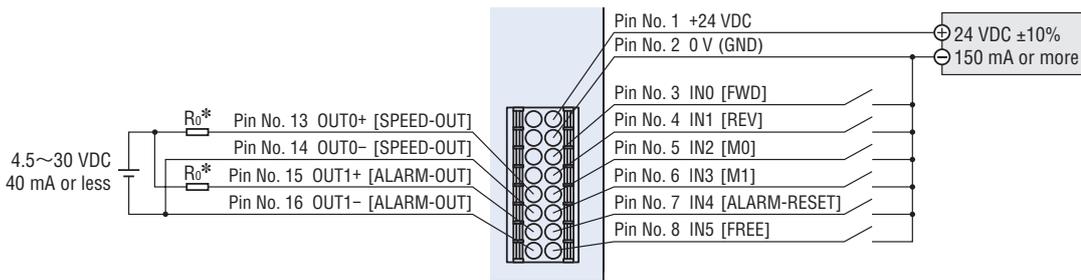

The figure shows a connection example of a motor with an electromagnetic brake. Be sure to connect the DC power supply for control in addition to the AC power supply when operating the motor.

\*For the DC power supply for control, use the power supply with reinforced insulation provided on the primary and secondary sides.

## ◇ Connection Example of Input and Output Signals (CN4)

The figure shows a connection example for the operation of the motor using switches having contacts, such as relays or switches, in the sink logic setting.

\*Recommended resistance value

For 24 VDC: 680 Ω~4.7 kΩ (2 W) For 5 VDC: 150 Ω~1 kΩ (0.5 W)

### Note

● Connect the controlling resistance R0 according to the power supply voltage to use so that the current applied to the output signals does not exceed 40 mA.

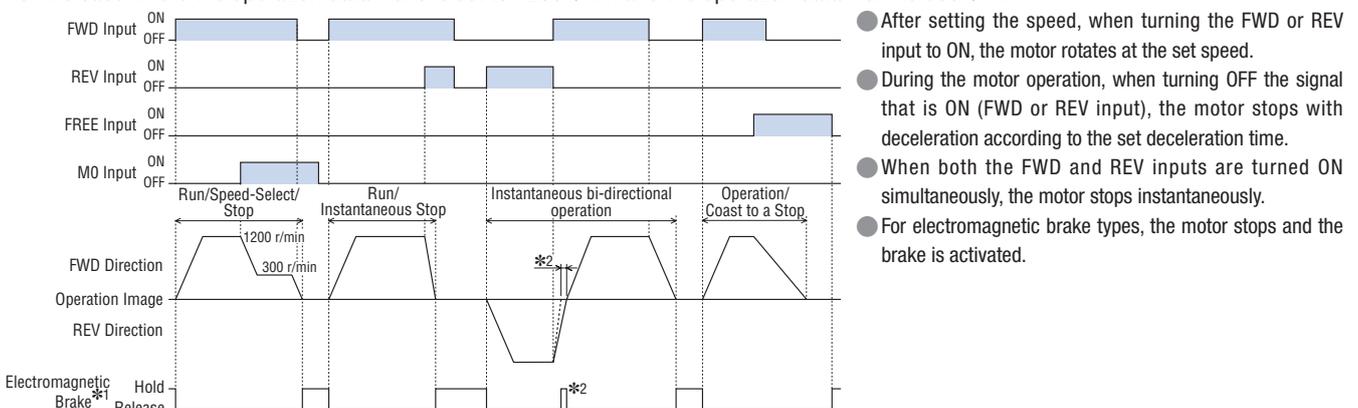

## ◇ Rating of Fuse

For overcurrent protection, be sure to insert a fuse into the AC power supply line.

Rating of Fuse	Single-Phase 110/115 VAC	216 Series (Littelfuse, Inc.) 10 A or equivalent
	Single-Phase 220/230 VAC	216 Series (Littelfuse, Inc.) 6.3 A or equivalent

## ● Timing Chart

For the case where the operation data No. 0 is set to 1200 r/min and the operation data No.1 to 300 r/min.

\*1 Only for electromagnetic brake types.

\*2 Only for electromagnetic brake types. This is retained when the "Deceleration Control" parameter is ON and a time lag (around 0.1 seconds) occurs due to the stop of the motor. When the "Deceleration Control" parameter is OFF, this is not retained. There is no time lag either.

### Note

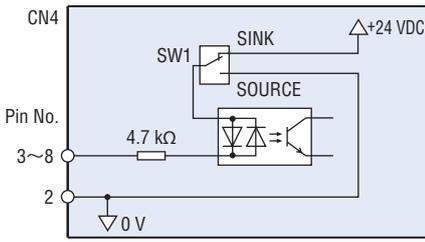

● The duration of ON for each signal must be 10 ms or more.

## I/O Signal Circuits

Select sink logic or source logic according to the external control device you will be using.

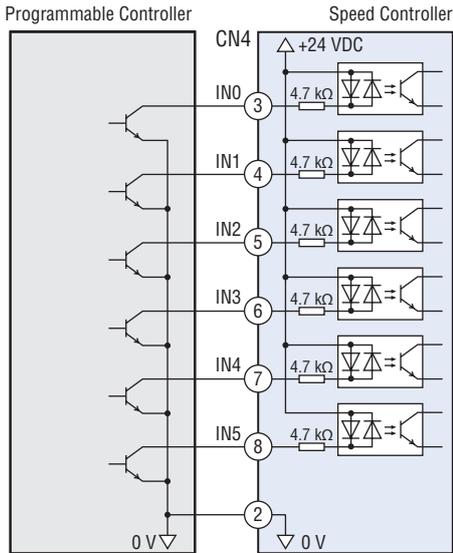

### ◇ Input Circuit

IN0~IN5

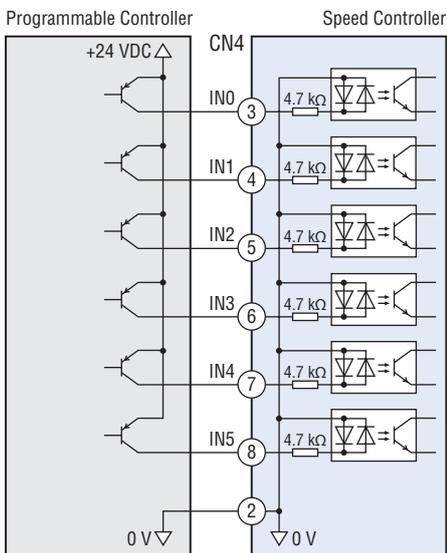

### ◇ Connecting to the Host Controller

#### ● Sink Logic

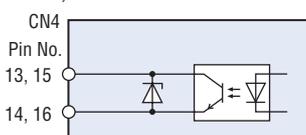

#### ● Source Logic

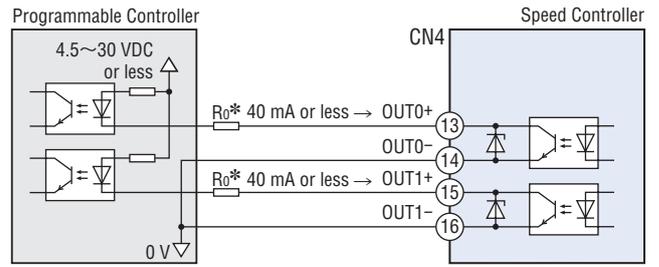

### ◇ Output Circuit

OUT0, OUT1

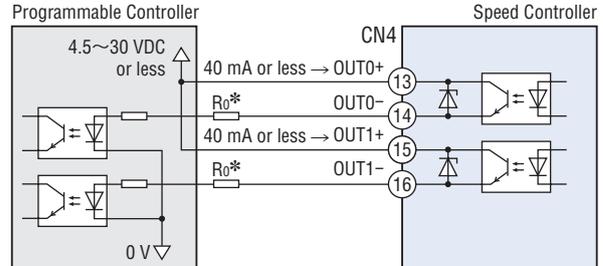

### ◇ Connecting to the Host Controller

#### ● Sink Logic

#### ● Source Logic

\*Recommended resistance value

For 24 VDC: 680 Ω~4.7 kΩ (2 W) For 5 VDC: 150 Ω~1 kΩ (0.5 W)

#### Note

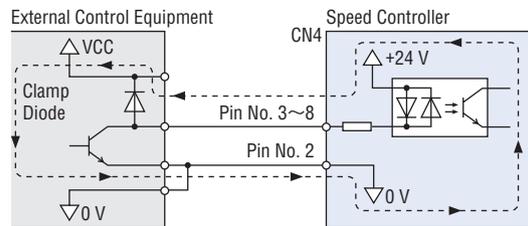

● The current applied to OUT0 and OUT1 must be 40 mA or less. If this value is exceeded, connect the limiting resistor R0.

### ◇ When an External Control Device with a Built-In Clamp Diode is Used

With external control equipment with built-in clamping diodes connected, if the power of the external control equipment is turned off with the speed controller turned on, the motor may rotate due to current flowing around. Also, depending on the speed controller and the external control equipment used, the motor may rotate even if the power is simultaneously turned ON/OFF. To turn ON/OFF the power, follow the procedure below.

To turn OFF: Speed controller → External control equipment

To turn ON: External control equipment → Speed controller

### ◇ Speed Output

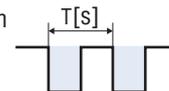

Pulse signals of 12 pulses are output at every rotation of the motor output shaft in synchronization with the motor rotation.

You can measure the SPEED-OUT frequency and calculate the motor speed.

$$\text{Motor Shaft Speed [r/min]} = \frac{\text{Speed Output Frequency [Hz]}}{12} \times 60$$

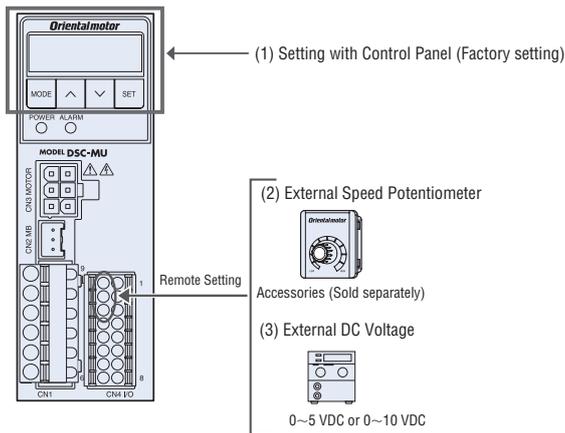

$$\text{Speed Output Frequency [Hz]} = \frac{1}{T[\text{s}]}$$

Speed Output Waveform

## Speed Setting Method

There are following 3 methods to set the speed.

### Setting with Control Panel

Up to 4 patterns of operating data can be set.

Select a pattern by switching the ON/OFF of the M0 and M1 inputs for operation.

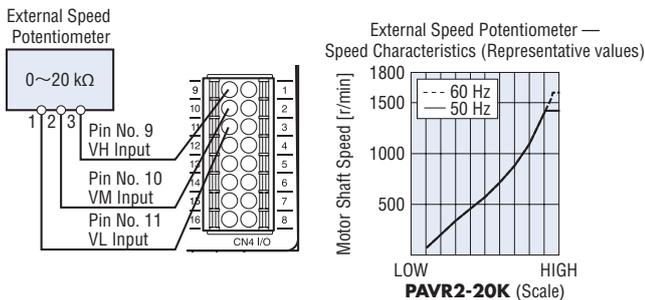

Operating Data No.	M1	M0	Description
0	OFF	OFF	Setting with control panel/remote setting*
1	OFF	ON	Setting with control panel
2	ON	OFF	
3	ON	ON	

\*When the "External Speed Instruction Input" parameter is "ON (enabled)" (Default: OFF), the speed can be set with an external speed potentiometer or external DC voltage.

### Setting with External Speed Potentiometer

Connect an external speed potentiometer to CN4.

Setting of the "External Speed Instruction Voltage Selection" parameter: "0-5" (Default)

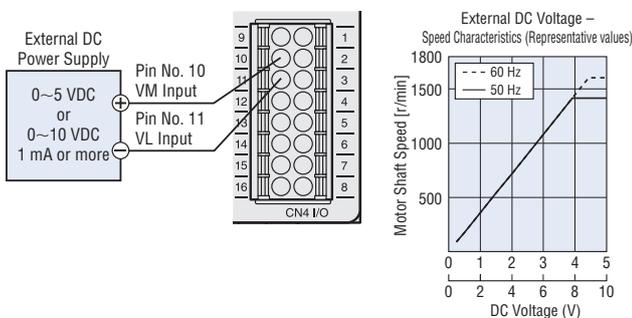

### Setting with External DC Voltage

Connect an external DC power (0~5 VDC or 0~10 VDC) to CN4.

Setting of the "External Speed Instruction Voltage Selection" parameter:

For 0~5 VDC: "0-5" (Default)

For 0~10 VDC: "0-10"

#### Note

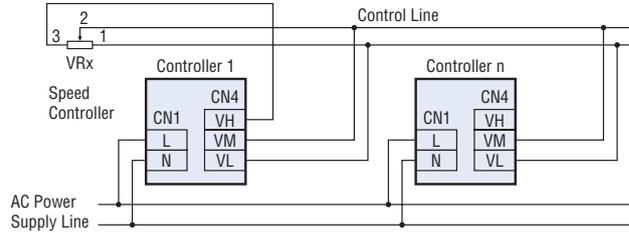

● The external DC voltage must be 10 VDC or less. Also, when connecting the external DC voltage, make sure not to connect to the wrong polarity. This may damage the speed controllers.

## Multi-Motor Control

Multiple motors can be operated at the same speed by using one external speed potentiometer or an external DC voltage.

### When Using an External Speed Potentiometer

Parallel-motor operation using the external speed potentiometer (VRx) should be performed with 20 speed controllers or less.

● The calculation method of the resistance value (VRx) when the number of speed controllers is connected is n

Resistance value (VRx) = 20/n (kΩ), Allowable dissipation = n/4 (W)

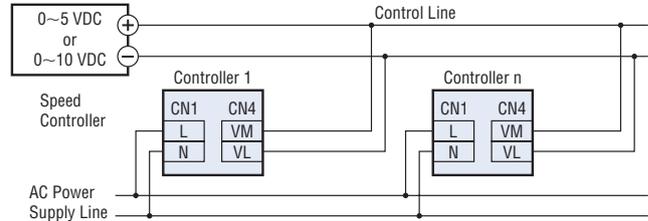

Example: When connecting 2 speed controllers

Resistance value = 20/2 = 10 (kΩ), Allowable dissipation = 2/4 = 1/2 (W)

### When using External DC Voltage

The number of connected controllers is limited according to the current capacity of the external DC voltage.

DC Power Supply

● The calculation method of the current capacity of the external DC power supply (I) when the number of speed controllers connected is n

Current Capacity (I) = 1 × n (mA)

Example: When connecting 2 speed controllers

Current Capacity (I) = 1 × 2 = 2 (mA)

## Repeated Operation Cycle

When repeating the motor operation in a short cycle, refer to the following cycle to set the motor housing temperature to 90°C or less.

Instantaneous Stop	6 W ~ 40 W	For repetition of operation and instantaneous stop 2 seconds or more, 50% or less of operation duty (Example: Run for 1 second., stop for 1 second)
	60 W, 90 W	For repetition of operation and instantaneous stop 4 seconds or more, 50% or less of operation duty (Example: Run for 2 seconds, stop for 2 seconds)
Instantaneous bi-directional operation	6 W ~ 40 W	For repetition of switching of rotation direction during operation Switching every 2 seconds or more
	60 W, 90 W	For repetition of switching of rotation direction during operation Switching every 4 seconds or more

● When using a motor having electromagnetic brake with the "Deceleration Control" parameter ON, the conditions on the continuous operation are applied. See also "Continuous Operation Time with Deceleration Control ON" under Common Specifications for the electromagnetic brake type (→ Page 03-24).

## Braking Current

For instantaneous stop, instantaneous bi-directional operation and operation by vertical driving\*, a large half-wave rectified braking current flows in the AC power supply line for around 0.4 seconds. For this sort of operation, consider the braking current (peak value) in the following table when selecting the capacity of the breaker and AC power supply for the equipment.

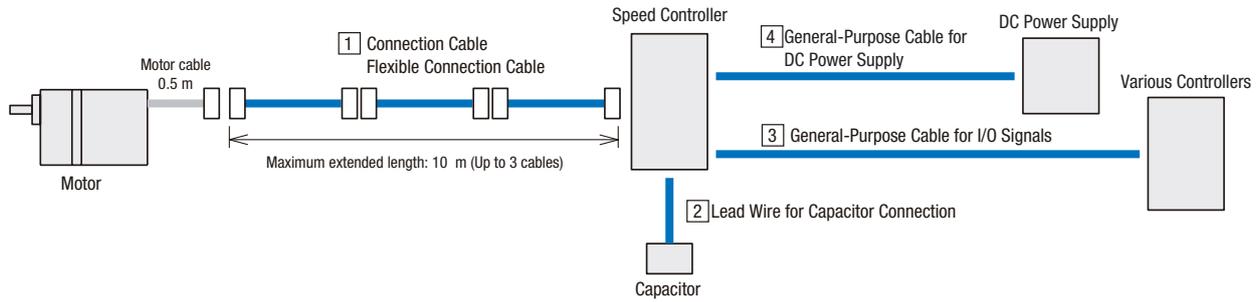

Motor Output Power	Braking Current (Peak value)	
	Single-Phase 110/115 VAC	Single-Phase 220/230 VAC
6 W	2 A	1 A
15 W	4 A	3 A
25 W	8 A	4 A
40 W	12 A	7 A
60 W	21 A	10 A
90 W	29 A	13 A

\*Only for electromagnetic brake types

# Accessories (Sold Separately)

## Cable

### Cable System Configuration

## 1 Connection Cables Flexible Connection Cables

This is a connection cable for connecting the motor and the speed controller. The maximum extension length of cables used between products is 10 m (up to 3 cables). Use the flexible connection cable in applications where the cable is bent and flexed.

### Product Line

#### Connection Cables For Standard Type (CC\_SC)

Product Name	Length L (m)	List Price
CC01SC	1	SGD35
CC02SC	2	SGD40
CC03SC	3	SGD50
CC05SC	5	SGD70
CC10SC	10	SGD120

#### Connection Cables For Electromagnetic Brake Type (CC\_SCM)

Product Name	Length L (m)	List Price
CC01SCM	1	SGD48
CC02SCM	2	SGD53
CC03SCM	3	SGD63
CC05SCM	5	SGD83
CC10SCM	10	SGD133

#### Flexible Connection Cables For Standard Type (CC\_SCR)

Product Name	Length L (m)	List Price
CC01SCR	1	SGD70
CC02SCR	2	SGD80
CC03SCR	3	SGD100
CC05SCR	5	SGD140
CC10SCR	10	SGD240

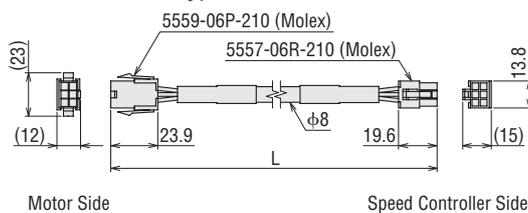

#### Flexible Connection Cables For Electromagnetic Brake Type (CC\_SCMR)

Product Name	Length L (m)	List Price
CC01SCMR	1	SGD95
CC02SCMR	2	SGD105
CC03SCMR	3	SGD125
CC05SCMR	5	SGD165
CC10SCMR	10	SGD265

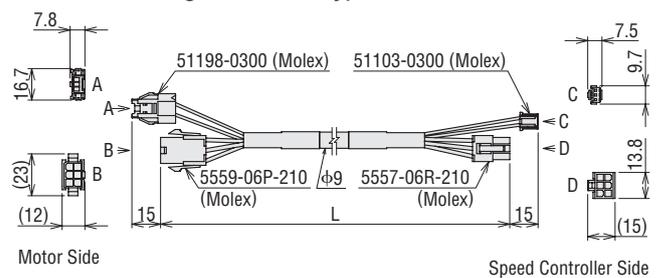

### Dimensions (Unit: mm)

#### For Standard Type

#### For Electromagnetic Brake Type

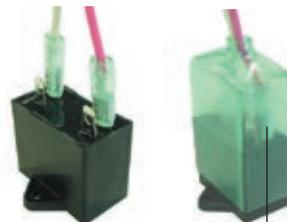

## 2 Lead Wires for Capacitor Connection

Includes lead wire with a terminal that can be connected to the capacitor terminal as it is.

### Product Line

Product Name	Set Details	List Price
LCCN0510	White: 5 leads Red: 5 leads	SGD15

Use with the capacitor cap

Application example

### 3 General-Purpose Cables for I/O Signals

These cables are useful for connecting the I/O signals of the speed controller. Up to 2 m is available.

Product Name	Length (m)	List Price
<b>CC16D005B-1</b>	0.5	SGD22
<b>CC16D010B-1</b>	1	SGD25
<b>CC16D015B-1</b>	1.5	SGD28
<b>CC16D020B-1</b>	2	SGD31

● The available general-purpose cable for I/O signals are those with 6 cores (**CC06D□B-1**), 10 cores (**CC10D□B-1**) and 12 cores (**CC12D□B-1**). Select the cable with most suitable number of cores according to the function you will use. For details on the products, contact with Oriental Motor sales office.

### 4 General-Purpose Cables for DC Power Supply

These cables connect the speed controller and DC power supply.

#### ● Product Line

Product Name	Length (m)	List Price
<b>CC02D005-3</b>	0.5	SGD11
<b>CC02D010-3</b>	1	SGD12
<b>CC02D015-3</b>	1.5	SGD13
<b>CC02D020-3</b>	2	SGD14
<b>CC02D050-3</b>	5	SGD23

## Flexible Couplings

These are clamp type couplings for connecting the motor and gearhead shaft with the driven shaft. Once the gearhead is determined, the coupling can be selected.

● Couplings can also be used with round shaft types. Select a coupling with the same inner diameter size as the motor shaft diameter.

Applicable Product	Load Type	Coupling Type	List Price
<b>SCM26</b>	Uniform load	<b>MCL30</b>	SGD61
	Shock load		
<b>SCM315</b>	Uniform load	<b>MCL30</b>	SGD61

## Motor and Gearhead Mounting Brackets

These dedicated mounting brackets are for mounting motors and gearheads.

Product Name	List Price	Applicable Product
<b>SOL2M4F</b>	SGD24	<b>SCM26</b> Round Shaft Type
		<b>SCM26</b> Parallel Shaft Combination Type
<b>SOL3M5F</b>	SGD26	<b>SCM315</b> Round Shaft Type
<b>SOL3M6F</b>	SGD26	<b>SCM315</b> Parallel Shaft Combination Type
<b>SOL4M5F</b>	SGD29	<b>SCM425</b> Round Shaft Type
<b>SOL4M6F</b>	SGD29	<b>SCM425</b> Parallel Shaft Combination Type
<b>SOL5M6F</b>	SGD31	<b>SCM540, SCM560, SCM590</b> Round Shaft Type
<b>SOL5M8F</b>	SGD31	<b>SCM540, SCM560, SCM590</b> Parallel Shaft Combination Type

## Mounting Bracket for the Capacitor

Allows you to connect capacitors on DIN rails.

Material: SPCC

Surface treatment: Trivalent chromate

<Application example>

## External Speed Potentiometer

### Features

- Potentiometer which allows the adjustment of rotation speed and torque.
- Easy installation  
Simply insert the potentiometer into the mounting hole. No tools are required. It can be removed.
- Easy wiring  
A terminal block is employed. Lead wire connection or soldering is not required. The efficiency of wiring is improved.

### Product Line

Product Name	List Price
<b>PAVR2-20K</b>	SGD25

The following items are included in each product.  
External speed potentiometer, operating manual

### Note

- The external speed potentiometer (**PAVR2-20K**) cannot be used together with a general-purpose cable for I/O signals.

### Specifications

Resistance: 0~20 kΩ  
Rate power: 0.05 W  
Resistance change characteristics: B curve

### Applicable Lead Wire Size

AWG22~18 (0.3~0.75 mm<sup>2</sup>)
